PROFESSIONAL EXPERIENCE

Tata Consultancy Services / DaVita — DevOps Engineer July 2021 – Present

- Designed and maintained Jenkins multibranch and single-branch pipelines using Groovy, automating application build and deployment workflows across multiple environments through a Build Once Deploy Everywhere (BODE) architecture.
- Developed and maintained reusable Jenkins shared libraries and Jenkinsfiles, including unit tests, to standardize and automate CI/CD processes across large enterprise services.
- Troubleshoot CI/CD and deployment failures across Jenkins, Docker, and Kubernetes by analyzing console output, pod logs, Kubernetes events, and application monitoring data.
- Managed recurring Jenkins platform upgrades by updating Docker images, JCasC configurations, Helm components, and inbound agent versions and executing automated upgrade procedures.
- Modernized Vault authentication across CI/CD pipelines by replacing AppRole-based authentication with JWT and implementing centralized key management to avoid Vault key-limit conflicts across Jenkins controllers.

SKILLS

Languages: Groovy, Java, Python, C++

CI/CD: Jenkins, Jenkins Shared Libraries, GitLab, Git

Cloud & Infrastructure: Kubernetes, Docker, Helm, GCP, Terraform

Monitoring & Operations: Grafana, Dynatrace, PagerDuty, ServiceNow

Security & Configuration: HashiCorp Vault, JCasC

Other: JFrog Artifactory, GAR

EDUCATION

Middle Tennessee State University — B.S. Computer Science

Minor: Mathematics | Cum Laude | May 2021

PROJECTS LED

Dev Readiness Pipeline

Led the dev-readiness project, which automated the backmerge workflow, eliminating manual steps involved in creating branch pull requests, merging changes into development, rebuilding artifacts, and deploying resulting artifacts to DEV.
